DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to multi-stage circuit, classified in class 327, subclass 333.
- II. Claims 21-23, drawn to a bootstrap circuit, classified in class 327, subclass 390.
- III. Claims 24-28, drawn to buffer circuit, classified in class 327, subclass 112.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require, for example, "a set of input switches". The subcombination has separate utility such as programming of memory.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require, for example, "a set of input switches". The subcombination has separate utility such as clock buffering.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their different required search

and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

During a telephone conversation with Steven Saunders on 21 June 2004 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-20. Affirmation of this election must be made by applicant in replying to this Office action. Claims 21-28 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 112

Claims 2, 10 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 2, 10 and 18, it is not understood how “switches” can have “phase and duty cycles”. Clearly, “phase” and “duty cycle” are aspects of signals, not of switches.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 6-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Pernyeszi (USPN 4,170, 740). Pernyeszi discloses, in Fig. 1, a circuit comprising: “a first stage (connected to 52)” having “an input switch (48)”; “a second stage (connected 54)” having “an output switch (50)”; and “a bootstrap module (rest of the circuit)”, all connected and operating similarly as recited by Applicant.

Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
